Nursing for Continence—Eatherly F. Jeter 1990 This book covers assessment and interventions for urinary and fecal incontinence resulting from virtually all causes. Provides necessary information on differences resulting from age, gender, and medical conditions. The book is organized to facilitate easy access and retrieval of specific information. Revised edition. The book provides an overview of the continence care process. It discusses the assessment and management of incontinence in various patient groups which parallels the delivery of care. The book is structured in chapters, starting by explaining fecal incontinence and its impact on quality of life. The second chapter discusses advanced practice continence nursing. The epidemiology of fecal incontinence is reviewed and self-testing is recommended to improve understanding of the alterations resulting in fecal incontinence. The next chapters focus on assessment, diagnosis and management of fecal incontinence in various patient groups which parallels the delivery of care. Since surgery is a treatment option in some cases, a chapter explains surgical approaches and the postoperative nursing care. As skin damage is the most common complication of fecal incontinence there is a chapter about management of these associated problems. The last chapter addresses managing fecal incontinence in the patient with urinary continence as well. Practice-related chapters include a case study. All chapters highlight key information in a box or a table.
